

CYBER SECURITY - SURVEY 2018

BIRGER. commissioned a Cyber Security survey during the third quarter of 2018 to evaluate the regional Cyber Security posture.

BIRGER's Cyber Security report published its Cyber Security Index (BIRGER. CYIndex 2018) which measures the Cyber Security maturity level based on 5 key functions.

A high index demonstrates a mature approach towards Cyber Security, a moderate index indicates that the Cyber Security posture needs to be improved, while a low index indicates that current Cyber Security practices lag behind international standards.

BIRGER. CYIndex 2018

Maturity level - Low : 0 – 50 | Moderate : 51 - 70 | High : above 70
